

CHAPTER: Force and Motion - SYNTHETIC DEMO 06

Definition: A force is a push or pull acting on an object.

Fact: A force can change an object's motion.

Explanation: The effect depends on the direction of a push or pull.

Example: A push can start a stationary toy car moving.

Activity: Observe how different pushes change a ball's motion.

Question: What kind of action can change an object's motion?

Solution: A force, described as a push or pull, can change motion.
