

CHAPTER: Light and Shadows - SYNTHETIC DEMO 07

Definition: A shadow is a dark region where light is blocked.

Fact: An opaque object blocks most light in this example.

Explanation: A shadow forms on the side away from the light source.

Example: A card between a lamp and wall produces a shadow.

Activity: Move an opaque card and observe the shadow position.

Question: What must be blocked for a shadow to form?

Solution: The object blocks light, creating a shadow.
