

CHAPTER: Plant Parts and Functions - SYNTHETIC DEMO 13

Definition: A plant part is a structure such as a root, stem, or leaf.

Fact: In this example, a root anchors a plant and takes in water.

Explanation: A stem supports leaves and connects plant parts.

Example: Water entering a root can move through the stem.

Activity: Label the root, stem, and leaf on a drawing.

Question: Which plant part is described as taking in water?

Solution: The described plant part is the root.
