

CHAPTER: Perimeter and Boundary Length - SYNTHETIC DEMO 58

Definition: Perimeter is the total boundary length of a shape.

Explanation: Add every side length using the same unit.

Formula: rectangle perimeter = $2 \times (\text{length} + \text{width})$.

Example: Sides 5 cm and 3 cm give a perimeter of 16 cm.

Activity: Measure a book cover and estimate its perimeter.

Question: Find the perimeter of a 4 cm by 2 cm rectangle.

Solution: The perimeter is $4 + 2 + 4 + 2 = 12$ cm.
